Funk Engineering opens its doors to new business

Northeast Ohio firm can handle cradle-to-grave development and design

CLEVELAND, OHIO – AUGUST 20, 2009

Funk Engineering, a full-service consulting firm, has announced that it will open its doors to new business.

The firm specializes in small to mid-sized projects, handling cradle-to-grave development and design of products. They also have the necessary experience to do the corresponding testing required.

The company is driven by a senior management with engineering experience and a strong background in several fields.

“It’s an exciting time for our team, obviously,” said Justin Funk, who serves as president. “We understand how to find solutions, and now we’re able to use our innovation to help others.” Joining Justin Funk on the senior management team is his brother, Nathan Funk, who is the director of engineering and technology. Nathan has more than 12 years of experience in engineering consulting and is a mechanical engineer by trade. He is also a proficient electrical engineer who is constantly in search of the best technology available.

“We’re excited about how we can drive innovation for our clients,” Nathan Funk said. “My goal is to bring them the best, most thoughtful solutions – and make sure those fit their project timeline.”
